

Roma

Roma hexagon tiles are a simple set of marble effects on a geometric porcelain base. The fine surface markings produced with HD technology have a matt finish. Because of this process, it is unlikely to see the same tile twice. As a result, the overall effect is a natural looking mix of marble markings. Roma hexagon tiles have four marble colour options that work well with other materials. Use these tiles to make a geometric honeycomb pattern that visually broadens narrow areas. These work particularly well in hallways that lead on to narrower passage areas. Pair Roma with industrial effects for a modern material contrast.
