

River

River porcelain slabs have an easy natural looking finish. Fine pebbles gather together with fine fissures running throughout. This elegant granular marking arrives with either a natural or polished surface. These large format pieces make a near seamless wall or floor covering. River porcelain has a softer look when compared with other slab materials. This makes it a useful series that can temper harder looks and bring a more natural element to a scheme. River slabs can cover larger floor areas with the minimum of interruptions. This together with the fine markings can easily disguise grout joints. As a result River creates the illusion of seamless stone.
